Immunity, Tumors and Aging: The Role of HSP70 Igor Malyshev, 2013-01-08 The book is dedicated to the topical area of biology and medicine and the role of stress proteins HSP70 in the regulation of intracellular protein homeostasis, signaling transduction and cell protection. The book is divided into chapters, which describe the discovery of HSP70 and its molecular structure, the mechanism of the synthesis and function in normal and damaged cells, examine the role of HSP70 in immunity, cancerogenesis, aging, Alzheimer's disease and cardiac surgery. In this book, the author looks at HSP70 as a factor which prevents the transformation of homeostasis mechanisms of intracellular proteins into a link in the pathogenesis of a disease.

Intermittent Hypoxia and Human Diseases Lei Xi, Tatiana V. Serebrovskaya, 2012-06-05 Intermittent hypoxia can cause significant structural and functional impact on the systemic, organic, cellular and molecular processes of human physiology and pathophysiology. This book focuses on the most updated scientific understanding of the adaptive (beneficial) and maladaptive (detrimental) responses to intermittent hypoxia and their potential pathogenetic or prophylactic roles in the development and progression of major human diseases. This is a comprehensive monograph for clinicians, research scientists, academic faculty, postgraduate and medical students, and allied health professionals who are interested in enhancing their up-to-date knowledge of intermittent hypoxia research and its translational applications in preventing and treating major human diseases.

Basic Aspects of Hearing Brian C.J. Moore, Roy D. Patterson, Ian M. Winter, Robert P. Carlyon, Hedwig E Gockel, 2013-05-29 The International Symposium on Hearing is a highly-prestigious, triennial event where world-class scientists present and discuss the most recent advances in the field of hearing research in animals and humans. Presented papers range from basic to applied research, and are of interest neuroscientists, otolaryngologists, psychologists, and artificial intelligence researchers. *Basic Aspects of Hearing: Physiology and Perception* includes the best papers from the 2012 International Symposium on Hearing. Over 50 chapters focus on the relationship between auditory physiology, psychoacoustics, and computational modeling.

Land Use Intensification Saul Cunningham, Andrew Young, David Lindenmayer, 2012-07-18 There can be little doubt that there are truly colossal challenges associated with providing food, fibre and energy for an expanding world population without further accelerating already rapid rates of biodiversity loss and undermining the ecosystem processes on which we all depend. These challenges are further complicated by rapid changes in climate and its additional direct impacts on agriculture, biodiversity and ecological processes. There are many different viewpoints about the best way to deal with the myriad issues associated with land use intensification and this book canvasses a number of these from different parts of the tropical and temperate world. Chapters focus on whether science can suggest new and improved approaches to reducing the conflict between productive land use and biodiversity conservation. Who should read this book? Policy makers in regional, state and federal governments, as well as scientists and the interested lay public.

Advances in Polymeric Materials for Biomedical Applications Iza Radecka, Marek M. Kowalczyk, 2022 Significant research efforts are currently being undertaken in the field of natural and synthetic polymers for a range of biomedical applications. (Co)polymer molecular structure, topology, self-assemblies, biodegradation, and hydrophobicity are of biomaterial importance for intrinsically biocompatible polymer systems. This book is comprised of nine chapters, published previously as original research contributions of the Special Issue focused on advances in polymeric materials for biomedical applications. The authors of these contributions are predominantly from central European countries, Italy and the United Kingdom. The content of this book will be of interest to scientists, scholars and students working in this area of knowledge, reflecting the progress in the development of advanced natural and synthetic polymer biomaterials.

Meta-Ecosystem Dynamics Frederic Guichard, Justin Marleau, 2021-09-25 This book presents current meta-ecosystem models and their derivation from classical ecosystem and metapopulation theories. Specifically, it reviews recent modelling efforts that have emphasized the role of nonlinear dynamics on spatial and food web networks, and which have cast their implications within the context of spatial synchrony and ecological stoichiometry. It suggests that these recent advances naturally lead to a generalization of meta-ecosystem theories to spatial fluxes of matter that have both a trophic and non-trophic impact on species. Ecosystem dynamics refers to the cycling of matter and energy across ecological compartments

through processes such as consumption and recycling. Spatial dynamics established its ecological roots with metapopulation theories and focuses on scaling up local ecological processes through the limited movement of individuals and matter. Over the last 15 years, theories integrating ecosystem and spatial dynamics have quickly coalesced into meta-ecosystem theories, the focus of this book. The book will be of interest to graduate students and researchers who wish to learn more about the synthesis of ecosystem and spatial dynamics, which form the foundation of the theory of meta-ecosystems.

The Evolution of Plant Architecture Marie Helena Kurmann, Alan R. Hemsley, Royal Botanic Gardens, Kew, 1999 Plant architecture is the morphological manifestation of the genetic make-up of a plant at any one stage during its development. Application of accurate architectural models provides a wealth of information about living and extinct plants, especially in regard to growth pattern and development. The Evolution of Plant Architecture brings together contributions from specialists in many different fields, including ecology, palaeobotany, systematics and evolution.

Lamto Luc Abbadie, Jaques Gignoux, Xavier Roux, Michel Lepage, 2006-11-22 Synthesizing 40 years of ongoing ecological research, this book examines the structure, function, and dynamics of the Lamto humid savanna. From the history of the Lamto ecology station, to an overview of environmental conditions of the site, and examining the integrative view of energy and nutrient fluxes relative to the dynamics of the region's vegetation, this exacting work is as unique and treasured as Lamto itself.

Advances in Asphalt Materials Shin-Che Huang, Hervé Di Benedetto, 2015-04-08 The urgent need for infrastructure rehabilitation and maintenance has led to a rise in the levels of research into bituminous materials. Breakthroughs in sustainable and environmentally friendly bituminous materials are certain to have a significant impact on national economies and energy sustainability. This book will provide a comprehensive review on recent advances in research and technological developments in bituminous materials. Opening with an introductory chapter on asphalt materials and a section on the perspective of bituminous binder specifications, Part One covers the physicochemical characterisation and analysis of asphalt materials. Part Two reviews the range of distress (damage) mechanisms in asphalt materials, with chapters covering cracking, deformation, fatigue cracking and healing of asphalt mixtures, as well as moisture damage and the multiscale oxidative aging modelling approach for asphalt concrete. The final section of this book investigates alternative asphalt materials. Chapters within this section review such aspects as alternative binders for asphalt pavements such as bio binders and RAP, paving with asphalt emulsions and aggregate grading optimization. Provides an insight into advances and techniques for bituminous materials Comprehensively reviews the physicochemical characteristics of bituminous materials Investigate asphalt materials on the nano-scale, including how RAP/RAS materials can be recycled and how asphalt materials can self-heal and rejuvenator selection

Synchrotron Radiation Applications Zhang Xinyi, 2018-03-20 This is a research-level review volume. It presents both

the fundamentals and the advanced research results, covering most part of important aspects of synchrotron radiation applications. Among the broad subjects of synchrotron radiation applications, as the main content of this book we have applications in VUV, soft X-rays, hard X-rays and XFEL (X-ray free electron laser) and important applications by various synchrotron-based techniques and methods, such as ARPES (angle-resolved photoemission spectroscopy), VUV photoionization spectroscopy, X-ray absorption/emission spectroscopy and X-ray absorption fine structure, X-ray diffraction, small angle X-ray scattering, X-ray excited optical luminescence, imaging and high pressure techniques. Contents: Angle Resolved Photoemission Spectroscopy Study Utilizing the Synchrotron Radiation (Yan Zhang, Dawei Shen, and Donglai Feng) Synchrotron-Based VUV Photoionization Mass Spectrometry in Combustion Chemistry Research (Nils Hansen, Bin Yang, and Tina Kasper) Developments on Synchrotron X-Ray Diffraction (Qiyun Xie and Xiaoshan Wu) Structural Biology and Synchrotron Radiation (Zihe Rao and Zhiyong Lou) Fluorescence Detected XAS — Unconventional Applications (Hiroyuki Oyanagi) The Application of X-Ray Absorption Fine Structure Spectroscopy in Functional Materials (Zhihu Sun, Xinyi Zhang, and Shiqiang Wei) Small Angle X-Ray Scattering and Its Applications (Zhonghua Wu and Xueqing Xing) Crystal-Based X-Ray Medical Imaging Using Synchrotron Radiation and Its Future Prospect (Masami Ando, Naoki Sunaguchi, Yongjin Sung, Daisuke Shima, Jong-Ki Kim, Gang Li, Yoshifumi Suzuki, Tetsuya Yuasa, Kensaku Mori, Shu Ichihara and Rajiv Gupta) X-Ray Imaging and Its Applications (Tiqiao Xiao and Honglan Xie) Synchrotron Radiation Applications in Medicine (Yifeng Peng, Liangqi Wang, Chenglin Liu, Alberto Bravin, Gang Li, Shaoliang Chen, Yongting Wang, Guo-Yuan Yang and Xinyi Zhang) Synchrotron Radiation Applications on High-Pressure Research (Bo Zou, Kai Wang, Shourui Li and Guangtian Zou) X-Ray Excited Optical Luminescence and Its Applications (Lijia Liu and Xuhui Sun) A Compact X-Ray Free-Electron Laser: SACLA (Hitoshi Tanaka, Takashi Tanaka, Kei Sawada, Makina Yabashi, and Tetsuya Ishikawa) Femtosecond Imaging of Single Particles and Molecules Using X-Ray Free-Electron Lasers (Andrew V Martin and N Duane Loh) Readership: Graduate students and professionals working on synchrotron radiation. Keywords: Angle Resolved Photoemission Spectroscopy (ARPES); Coherent Diffractive Imaging (CDI); Combustion; Detector Development; Free-Electron Laser; High Pressure; Medical Imaging; Nanomaterials; Photoemission Spectroscopy; Protein Crystallography; Serial Femtosecond Crystallography (SFX); Single Particles and Molecules; Small Angle X-Ray Scattering; Strongly Correlated Materials; Surface X-Ray Diffraction; Synchrotron Radiation Applications; Table Top X-Ray Source; VUV Photoionization Mass Spectrometry; X-Ray Absorption Fine Structure (XAFS); X-Ray Absorption Spectroscopy (XAS); X-Ray Excited Optical Luminescence (XEOL); X-Ray Fluorescence (XRF) Review: Key Features: The book contains the latest synchrotron-based techniques and research results All contributors are specialists or leading scientists in their fields The book includes new techniques and methods that will potentially get wider applications in various disciplines

Exercise and Stress Response Marius Locke, Earl Noble, 2002-03-28 Over the past 10 years, researchers have been

investigating the expression, regulation, and protective nature of stress proteins (SPs) during and following exercise. Since the expression of SPs have been shown to provide protection to cells and tissues, the importance of understanding their role during exercise cannot be understated. However the terminology, the myriad of stress proteins, and their complex regulation creates a confusing arena in which to enter. *Exercise and Stress Response: The Role of Stress Proteins* provides an up-to-date review on topics related to exercise and health, giving investigators the necessary background to pursue stress proteins.

ABOUT THE EDITORS: Marius Locke, Ph.D. is an Assistant Professor in the Faculty of Physical Education and Health at the University of Toronto in Ontario, Canada. Dr. Locke received a B.A. with honors in Physical Education (1984), a B.Sc. in Biology (1987), and a Ph.D. in Kinesiology from the University of Western Ontario (1992), where he also played varsity football. Dr. Locke was awarded a Natural Science and Engineering Research Council of Canada Post Doctoral Fellowship and studied at the Deborah Research Institute in Browns Mills, New Jersey from 1993-1996. In 1999, Dr. Locke received the American College of Sports Medicine's new investigator award. Dr. Locke is a member of American College of Sports Medicine, the Canadian Society for Exercise Physiology and the Cell Stress Society International. Earl G. Noble, Ph.D. is an Associate Professor in the School of Kinesiology at the University of Western Ontario in London, Ontario, Canada. He received his B.Sc. (1973) and M.Sc. (1975) in Kinesiology from the University of Waterloo and his Ph.D. from Washington State University (1980). Dr. Noble is a member of the Canadian Society for Exercise Physiology, the American College of Sports Medicine and the Cell Stress Society International and the Research Group on Biochemistry of Exercise of the International Council of Sport Science and Physical Education (UNESCO). The overriding theme of his research is to examine muscle plasticity and the manner in which muscle adapts to novel or stressful conditions, especially exercise.

Aging, Biotechnology, and the Future Catherine Y. Read, Robert C. Green, Michael A. Smyer, 2008-06-16 This wide-ranging, multidisciplinary collection examines how advances in medicine and technology are affecting the aging process and the lives of elderly persons. In analyzing the state of biotechnology, these essays applaud the positive—extended longevity and the potential for greater quality of life—while probing such ethical quandaries as presymptomatic genetic testing, therapeutic cloning, antiaging technologies, and the transhumanist movement. The volume includes discussions about the respective roles of health care professionals, government, and individuals in shaping a workable regulatory framework and unifying multiple perspectives to make the biotechnology revolution beneficial to all. Featuring contributions from renowned scholars of religion, ethics, philosophy, psychology, law, medicine and nursing, and gerontology, *Aging, Biotechnology, and the Future* illuminates the promises and perils of growing old in the biomedical age. Advances in Biomedicine Mieczyslaw Pokorski, 2019-07-30 This book gathers multidisciplinary articles that present advances of our understanding of diseases and the effective treatment of patients. The authors share recent clinical and experimental research findings, highlighting poorly understood areas with uncertain treatment outcomes, such as giant-cell bone tumors and their propensity to metastasize to the lungs; subterranean rehabilitation in pulmonary disorders; male reproductive hormone regulation during physical exercise in hyperbaric, hyperoxic environments, like underwater diving; and amelioration of cognitive decline owing to increased cerebral blood transit time after internal carotid artery stenting. Other topics include new concepts and innovations in the treatment of diabetes in pregnancy, and leg ulcers in chronic venous insufficiency, as well as molecular research on the toxic effects of oxidative stress, impaired cell autophagy, and experimental conditions resembling air pollution. Featuring the latest interdisciplinary advances in biomedicine, this book is a valuable resource for medical professionals, both academics and practitioners, and all allied health-care workers.

Reproductive Biology of Plants Kishan Gopal Ramawat, Jean-Michel Merillon, K. R. Shivanna, 2016-04-19 Reproductive biology is the basis of species improvement and a thorough understanding of this is needed for plant improvement, whether by conventional or biotechnological methods. This book presents an up to date and comprehensive description of reproduction in lower plants, gymnosperms and higher plants. It covers general plant biology, pollination

Immunology of Aging Ahmad Massoud, Nima Rezaei, 2013-11-29 The rapidity of scientific progress over the last few years guarantees the utility of this new collection of state-of-the-art reviews on the immunology of aging, which is the result of extensive collaboration of more than sixty of the greatest thinkers and scholars in the field, in cooperation with a number of junior colleagues. The book summarizes current knowledge on the cellular and molecular aspects of the aging immune system and their clinical relevance, providing insights into the effects of the aging process on susceptibilities to those diseases most common among elders. The retrieval strategies used to slow down the decline in the immune system in the elderly are another subject detailed extensively. By providing a broad overview of immunosenescence and its consequences, as well as their potential modulation, this book will fill a gap in a timely manner. It will be of value to all immunologists, whether novice or experienced, as well as geriatricians and epidemiologists.

The Coming Generational Storm Laurence J. Kotlikoff, Scott Burns, 2005-01-18 How to avoid a fiscal crisis in the next generation— and how to protect yourself if the government acts too late: policy recommendations and individual strategies to protect against skyrocketing tax rates, drastically reduced health and retirement benefits, high inflation, and a ruined currency. In 2030, as 77 million baby boomers hobble into old age, walkers will outnumber strollers; there will be twice as many retirees as there are today but only 18 percent more workers. How will America handle this demographic overload?

How will Social Security and Medicare function with fewer working taxpayers to support these programs? According to Laurence Kotlikoff and Scott Burns, if our government continues on the course it has set, we'll see skyrocketing tax rates, drastically lower retirement and health benefits, high inflation, a rapidly depreciating dollar, unemployment, and political instability. The government has lost its compass, say Kotlikoff and Burns, and the current administration is heading straight into the coming generational storm. But don't panic. To solve a problem you must first understand it. Kotlikoff and Burns take us on a guided tour of our generational imbalance, first introducing us to the baby boomers—their long retirement years and the protracted delay in their departure to the next world. Then there's the fiscal child abuse that will double the taxes paid by the next generation. There's also the deficit delusion of the under-reported national debt. And none of this, they say, will be solved by any of the popularly touted remedies: cutting taxes, technological progress, immigration, foreign investment, or the elimination of wasteful government spending. So how can the United States avoid this demographic/fiscal collision? Kotlikoff and Burns propose bold new policies, including meaningful reforms of Social Security, and Medicare. Their proposals are simple, straightforward, and geared to attract support from both political parties. But just in case politicians won't take the political risk to chart a new direction, Kotlikoff and Burns also offer a life jacket—guidelines for individuals to protect their financial health and retirement. This paperback edition of *The Coming Generational Storm* has been revised and updated and includes a new foreword by the authors.
